

Pop Songs Disc

In this task the student will create a new program that creates a list of songs for a CD by reading from a file.

1. Use the file PopSongs.java & Song.java to finish the source code.
2. Use the PopSongs.txt file to read contents of the classics.
3. Compile the program and debug, repeating until it compiles successfully.
4. Run the program and test.

Output:

The output should read each title and artist on one line.

Example:

Contents of PopSongs:

Thriller by Michael Jackson
etc..

This program should be well documented (comments for the programmer and user) both internally and externally.

For this program, you will need to use `import java.io.*;` - which contains all the classes required for input and output operations.

Save the file your first initials and last name, etc. RCPopSongs
